# LANDSMAN® 6205

Invest in Quality®

# **MAXIMIZE CROP YIELD POTENTIAL AND PRODUCTIVITY**

## **ACCEPTING TODAY'S RESIDUE CHALLENGE**

Increased residue due to higher yields, Bt corn varieties and less "overwinter" stalk deterioration are just a few of the situations that can push field cultivator seedbed preparation systems beyond their design capabilities. The LANDSMAN answers this challenge.

## SOLUTIONS

Utilizing a unique 4-step tillage system, the LANDSMAN offers unmatched productivity with a 6-bar frame for non-stop residue handling. Sizes to 45 feet produce up to 400 acres per day of ideal seedbed.

#### LANDSMAN VALUE

The agronomic benefits provided by the LANDSMAN 4-step tillage system culminate in increased yield potential. Increasing crop yield is the most effective way to increase profitability. Independent agronomic and university studies have shown the 4-step tillage system provided superior yields to field cultivator and no-till systems.

# COMBINATION **SOIL FINISHER** LANDSMAN<sup>®</sup> 6205 in brief

| Models  | Working<br>Width | Number of<br>Shanks | Number of<br>Disc Blades |  |
|---------|------------------|---------------------|--------------------------|--|
| 6205-18 | 18'              | 25                  | 24                       |  |
| 6205-21 | 21'              | 29                  | 26                       |  |
| 6205-24 | 24'              | 33                  | 32                       |  |
| 6205-27 | 27'              | 37                  | 36                       |  |
| 6205-31 | 31' 6''          | 43                  | 40                       |  |
| 6205-36 | 36'              | 49                  | 46                       |  |
| 6205-42 | 42'              | 57                  | 54                       |  |
| 6205-45 | 45'              | 61                  | 60                       |  |

# **Combination Soil Finisher EXCLUSIVE 4-STEP PROCESS**

### **1 CUT RESIDUE**

Exclusive KUHN Krause Excalibur® blades with their 32-flute edge uniformly size residue for smooth flow through the machine. The 8° rear-angled gang minimizes lateral soil movement to improve the leveling action of shanks.

## 2 MIX

Cultivator shanks provide thorough mixing action, dislodge weeds and settle soil. The LANDSMAN® offers a choice of 7" spacing for smaller clod sizing and more residue coverage, or 9" spacing for maximum residue handling capabilities.

### 3 LEVEL SOIL

Tine or spike harrows provide excellent clod breaking and additional leveling action. Choose the harrow system that best fits your cropping practice.

#### **ENHANCE SEEDBED CONDITION** 4

The exclusive 24/7<sup>®</sup> Soil Conditioning Reel, available in 3-row tine with reel or 3-row spike with reel, accomplishes final clod sizing and soil firming with the ability to select a range of constant down pressure or float position to extend the weather/tillage window.

### **Return on Investment**

One pass with the LANDSMAN offers these economic benefits:

- Reduction of tillage trips by at least one pass
- Decreased fuel consumption
- Efficient use of available labor

# **MAXIMUM RESIDUE MANAGEMENT**

# SHANK AND LEVELING OPTIONS

Crop residue management is critical for a healthy, productive soil environment. Sized residue, properly mixed into the soil, minimizes soil compaction, releases stored nutrients and aids in moisture infiltration. Residue cover provides protection against soil erosion from heavy rainfall and high winds.

The front-mounted gangs on the LANDSMAN<sup>®</sup> are the beginning of this crop residue management process. The 8° gang angle and Excalibur® blades combine to minimize lateral soil movement. The exclusive 32-flute Excalibur blade uniformly sizes residue and begins the leveling process. The 9-1/8" blade spacing provides 24% more residue cutting force than competitive models with narrower blade spacing. Hydraulic gang control, providing on-the-go adjustment is standard.

# Shank Choices

|              |   | Lowers dra               |
|--------------|---|--------------------------|
|              |   | Best perfo<br>residue co |
| unt          | 190 lb. point load maintains consistent depth in hard soils           |                          |
| Spring Mount | 15" trip height for protection in rocky soils                         |                          |
| Sprir        | Ultra-rigid shank assembly virtually eliminates side-to-side movement |                          |
|              |   |                          |
| K-Tine Mount | 180 lb. point load  |                          |
|              | Vibrating action moves residue and shatters surface compaction        |                          |
|              | No pivots or bushings   |                          |

# **Spring Mount Design**

KUHN Krause's spring mount design utilizes a single bolt to clamp the mount to the beam, greatly reducing setup time. The improved design also provides more strength and stability to the clamping surface for years of reliable operation.

# MAXIMUM RESIDUE CAPACITY

The LANDSMAN cultivator shanks provide thorough mixing action, dislodge weeds and settle soil. Two shank spacing options are available. For smaller clod sizing and average residue coverage, choose the 7" spacing. The 9" spacing easily accommodates heavy residue coverage. KUHN Krause offers several agronomic shank choices to meet your specific needs.

# 24/7<sup>®</sup> Leveling Systems

KUHN Krause offers a variety of harrows to meet your specific soil and residue requirements. These harrows are available for all sizes and provide time saving features to increase overall productivity.

# **ADDITIONAL FEATURES**

## **GUARDIAN HITCH®**

This exclusive option guards against stress This standard feature prevents hydraulic on the tractor drawbar and implement frame. Lateral drawbar forces are transferred operator convenience. The tractor interface through the hitch pivot, where shock load from steering correction is dampened by urethane blocks.

## **TRACTOR INTERFACE CENTER**

hoses from binding in turns and adds system includes a hose routing chart, color coded hose grips, storage for light hookup and the owner's manual.

#### SINGLE-POINT DEPTH CONTROL

Standard on all LANDSMAN models, single-point depth contol allows fine tuning of working depth for precise seedbed conditions. The depth indicator is located on top of the tube for easy viewing.

### GANG DEPTH ADJUSTMENT

Hydraulic gang depth adjustment is spring cushioned to protect against rock damage and allows on-the-go depth setting from equal to or 5" above the sweeps. This allows walking beams on all machine sizes. tailoring of residue coverage for fragile and non-fragile crop residues.

### WALKING BEAMS

Walking beams allow for consistent working Choose from two agronomic conditioner depth on rough ground and more stable road transport. The LANDSMAN features

### TWO REEL OPTIONS AVAILABLE

designs. The heavy-duty round spiral reel provides clod sizing and firming in mellow, loam-type soils, and offers better performance in wet conditions. The heavy-duty flat spiral reel provides aggressive clod sizing in hard or high clay content soils.

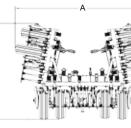

24/7<sup>®</sup> reel bearing

Spherical pivot bearing

# **MAINTENANCE-FREE BEARINGS**

- No daily grease maintenance required for the new PEER<sup>®</sup> TILLXTREME<sup>™</sup> maintenance free bearings, now incorporated into the Excalibur® gang assemblies and 24/7<sup>®</sup> conditioning reels.
- A new spherical pivot bearing for each walking beam assembly requires no grease, along with rocker and wing hinge pivots.
